JAPANESE IRIS

This most beautiful of all Iris is among the least known, but we predict that before long it will become one of the most popular.

Japanese Iris blooms when all other Iris are through blooming. In Kansas this is the latter part of June. The flowers are exceedingly large - 6 to 8 inches or more across is not uncommon. And there are usually two or three flowers per stem. Flowers bear a remarkable resemblance to orchids.

MULTIFLORA ROSES

(*Rosa Multiflora Japonica*)

This is the thorny type best adapted for hedges, screens, and windbreaks. The demand for this continues strong. Be sure to reserve enough for your needs.

2/16 to 3/16 inch caliper

\$3.50 per 100; \$30.00 per 1000

SURPRISE LILY!

(*Lycoris Squamigera*)

This interesting and beautiful novelty has always been scarce, but we are now able to offer our customers a limited number of very nice blooming-size bulbs. Produces a heavy clump of foliage in early summer. Then suddenly it all disappears as if the plant were dead. Then mysteriously in August there shoots up a naked stem 18 inches to 2 feet tall that bursts into bloom with a huge cluster of large beautiful pink lily flowers. Hardy.

BUTTERFLY BUSH

BUTTERFLY BUSHES IN WILLIS NURSERIES, SEPTEMBER, 1952

The Butterfly Bushes are becoming more popular every year because of their usefulness in landscape planting. No shrub gives quicker results. Plant in the spring—have a full-grown bush in full flower the same summer. Established plants start blooming in midsummer and continue until frost. Plant them in the rear of perennial beds for high background. Mix with shrubs for variety and color. They make good cut flowers for home use. Widely used by florists. Not only are the flowers showy, but they attract myriads of brightly colored butterflies that hover around them all day long.

Butterfly Bushes are handsome shrubs with long narrow leaves, grow 2 to 4 feet high in one season and come in a wide range of color: red, purple, lavender, pink and white.

Butterfly Bushes like reasonably fertile, well-drained soil and plenty of sunlight. In the northern two thirds of the country the tops die down in the winter, but new tops are developed the next season and bloom the same year.

We offer you a selection of five of the very best varieties.

Charming. The most nearly pink Butterfly Bush we have seen. Large, rather open sprays on tall vigorous bushes.

Dubonnet. Live, reddish-purple, like the wine for which it is named. Extra-long, full spikes. Continues to be one of the most popular.

Floralart. Developed in New Mexico by Mr. A. C. Miller and introduced by us.

In our opinion it has the best flower of all because nearly the whole spike blooms at one time. On most other varieties the bottom flowers are faded before the top flowers open. For this reason Floralart makes best cut flowers. Handsome orchid-lavender flowers in large, full, very compact spikes. Medium-size bush.
